

You **Must** follow this procedure when installing this equipment.

1. Plug your light fitting into the Mains unit. Via the grey lead.
2. Connect the mains unit to a suitable power supply and switch on. When the light is lit.....
3. Connect the battery. Inside the battery box.
4. Then press and hold down the T1 BUTTON for a few seconds (found on the green circuit board inside the mains unit). Release the button when you see random flickering of the LEDs 2, 3 and 4.  
A successful installation is shown by LED3 flashing only.

This is absolutely necessary for the correct installation of the batteries.  
Failure to follow this procedure will render the batteries useless after only a few hours.  
This procedure must be followed each time the batteries are disconnected / connected.

## Attention:

The installation process above is compulsory the first time you set up the lighting system and **every** time you do one of the following....

- A battery is changed
- The connected loads are changed
