

## Diverter pulley hood for different rope departures

The cover hoods are universally usable. They can alternatively be attached to the engine frame or to the concrete footing. Depending on the rope position it is possible to make a sight check of the running grooves through the 8mm perforated sheet.

### Suitable entering points overview

For low sitting pulleys additional cover sheets for the lower entering point are necessary, see page 24.

Mounting example on an engine frame with horizontal rope departure.

Mounting example on an engine frame with inclined rope departure.

The openings for the rope are cut out on-site by the assembler. For this purpose a usual side cutter can be used.

(Plate shears, [Art.no. 63550](#), for cutting out the rope slot can be ordered additionally on request.)

### Advice:

Please note the advice "Protective covers on rotating parts" on page 155.
